PROJECT PROFILE

Project Title	: Dessert Magic (Online Dessert Ordering System)
Project Type	: Web-Based Application
Project Internal Guide	: Mrs. Twinkle Chapatwala
Team Member	: 4
Front End	: HTML, CSS, JavaScript
Back End	: PHP, MySQL
Submitted By	: Shah Pushti Ganwani Honey Salunke Krushiv Panchal Krish

INTRODUCTION

- This project is an online platform for ordering desserts like cakes, pastries, waffles, and shakes.
- It connects customers, vendors, and delivery riders in one system.
- Customers can browse products, place orders, and track delivery.
- Admin manages the entire system, and vendors upload their products.

ENVIRONMENT DESCRIPTION

- The system works in a web environment.
 - It runs on a local server like XAMPP/WAMP.
 - Supports modern browsers (Chrome, Edge).
 - Uses client-server architecture.
-
- User-friendly interface
 - Web platform
 - Easy access via browser

HARDWARE REQUIREMENT

- Processor: Intel i3 or above
- RAM: Minimum 4 GB
- Storage: 500 GB HDD or SSD
- System Type: 64-bit OS
- Internet Connection

SOFTWARE REQUIREMENT

- Operating System: Windows 10/11
- Frontend: HTML, CSS, JavaScript
- Backend: PHP
- Database: MySQL
- Tools: XAMPP / WAMP Server
- Browser: Google Chrome

TOOLS & TECHNOLOGY DESCRIPTION

TOOLS :

Documentation Tools :

MS-PowerPoint

MSWord

Development Tools :

Notepad++

WampServer

Sublime Editor

TOOLS & TECHNOLOGY DESCRIPTION

TECHNOLOGY :

Core Technology :

PHP (Back End), HTML, CSS, MySQL

Extra Technology :

jQuery

JavaScript

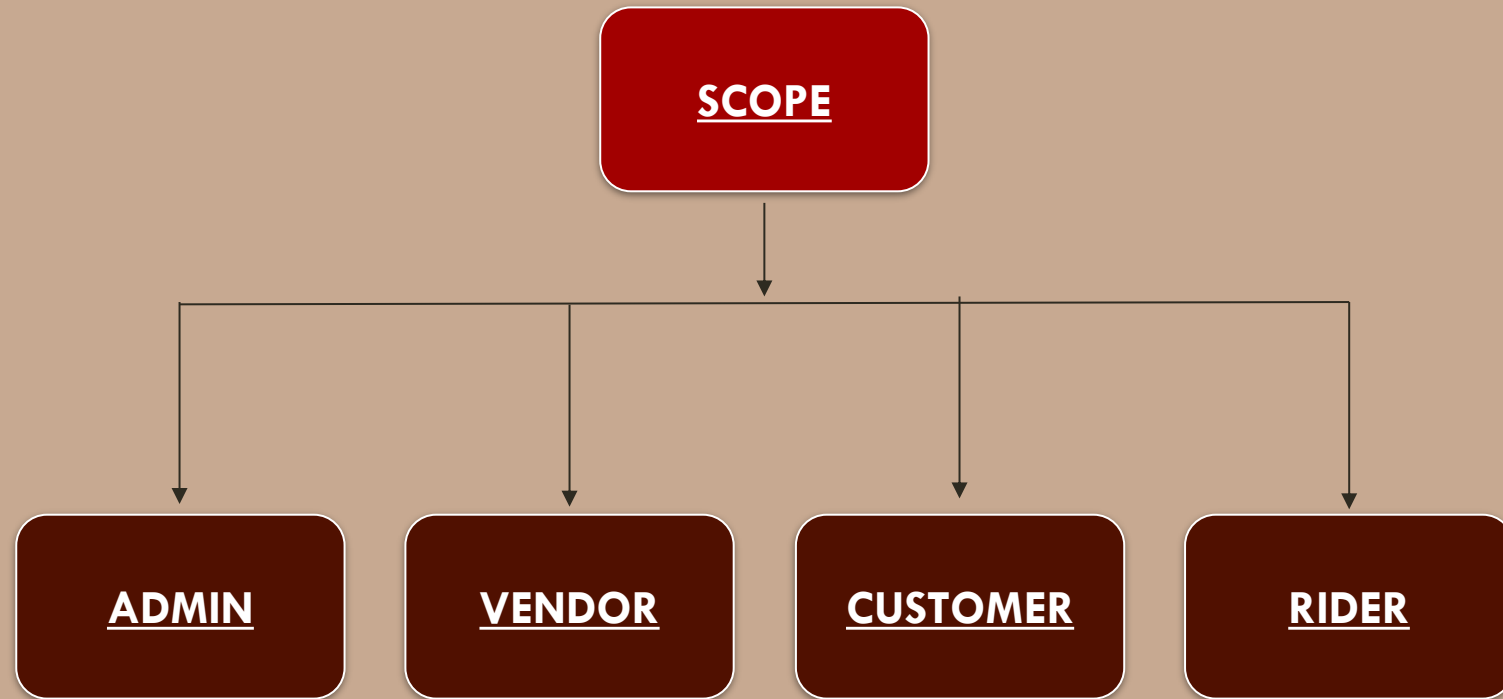

AJAX

Bootstrap

ADVANTAGES

- Easy and convenient online ordering
- Saves time for customers
- Multi-vendor support (different shops in one platform)
- User-friendly interface
- Secure login system
- Efficient delivery management
- Real-time order tracking
- Reduces manual work for admin
- Accessible anytime, anywhere
- Improves business growth for vendors

ADMIN MODULE

- Admin manages the complete system
- Secure admin login authentication
- Add, update, and delete products
- Manage users and vendors
- View and manage all orders
- Assign delivery riders to orders
- Update order status (pending, delivered, cancelled)
- Monitor system activities
- Dashboard with reports and analytics

VENDOR MODULE

- Vendor login system
- Add and manage products
- Manage categories
- Upload product images
- View customer orders
- Update product details
- View incoming customer orders
- Manage stock availability
- Add special offers and discounts
- Track order status
- Improve product listings

CUSTOMERS

- User registration and login
- Browse products by category
- Search and filter products
- View product details
- Add to cart and manage cart
- Place orders easily
- Cancel orders if needed
- Track order status
- View order history
- Receive offers and discounts
- Easy and user-friendly interface

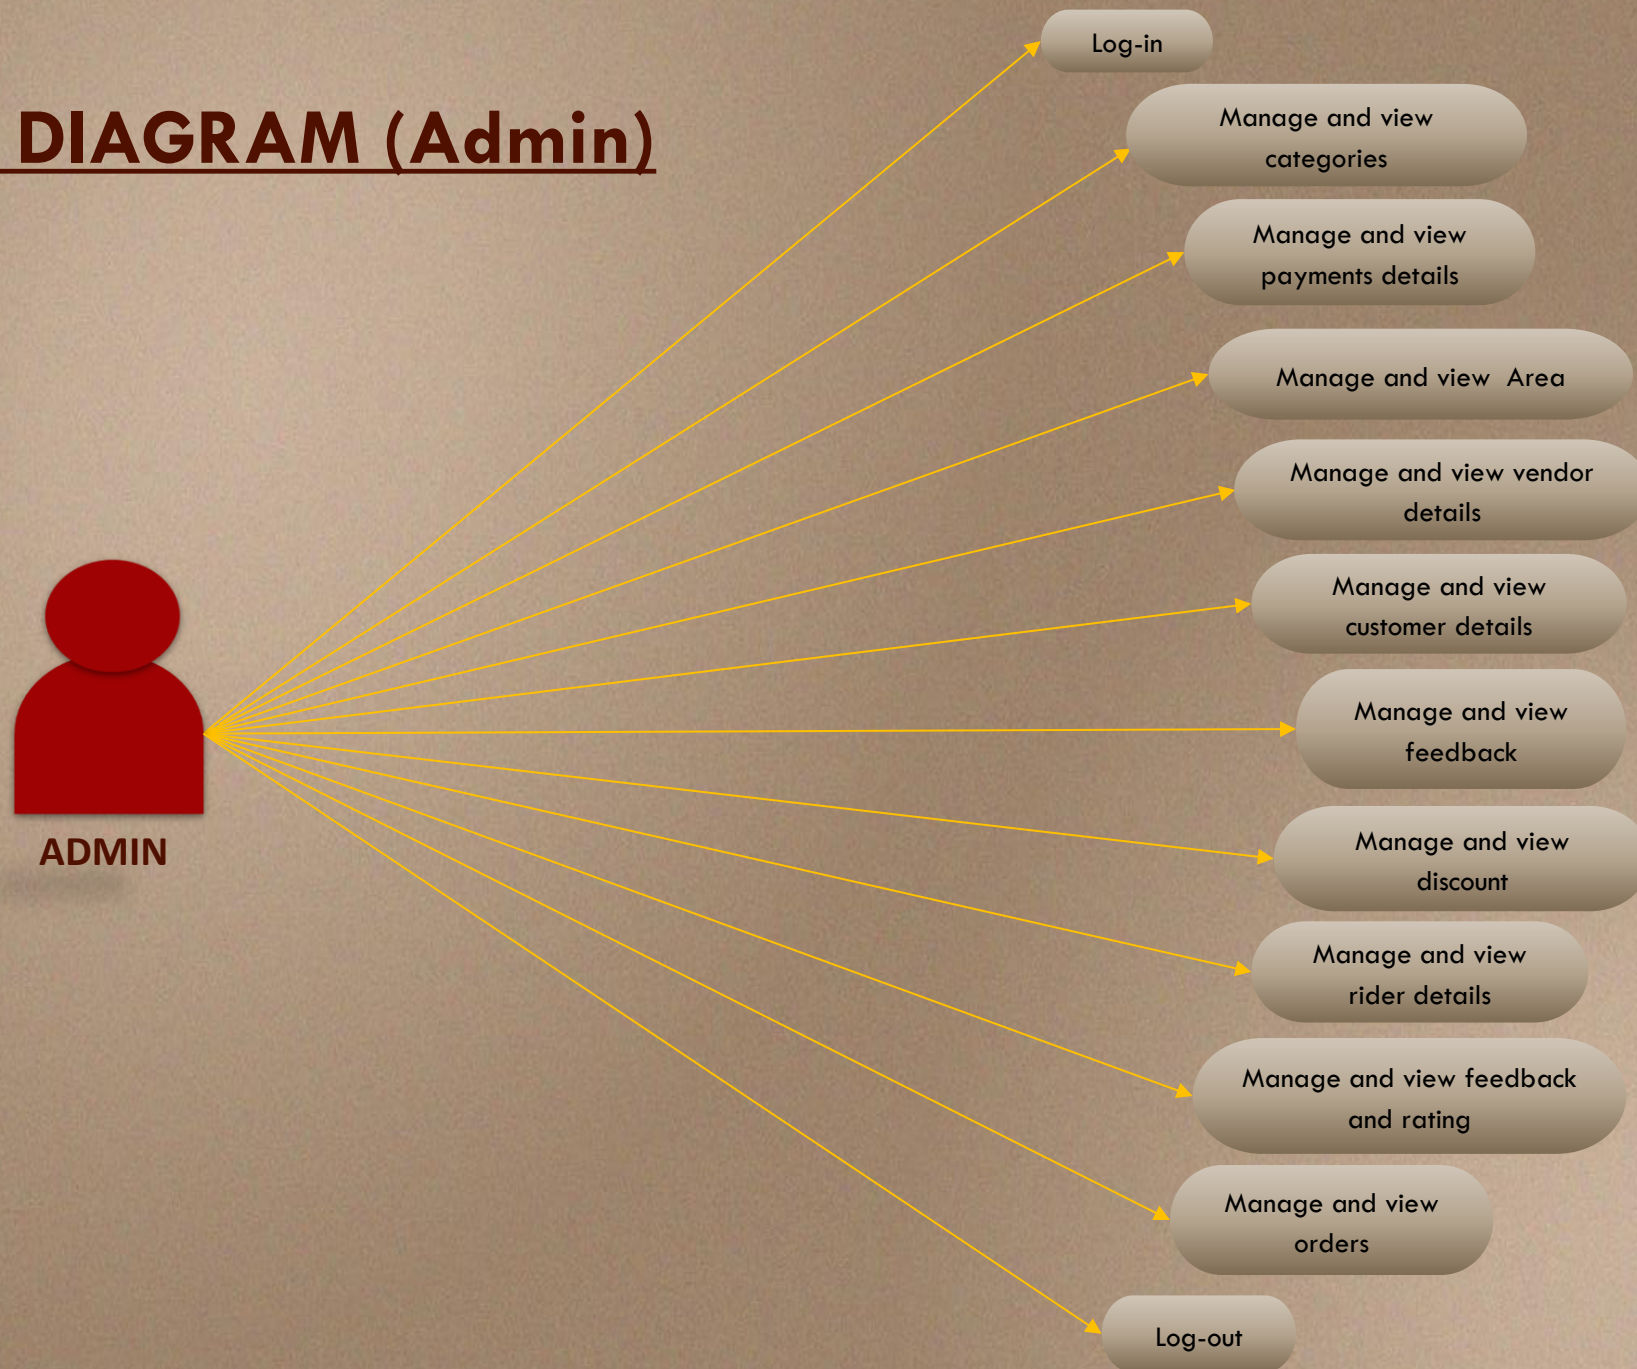

RIDERS

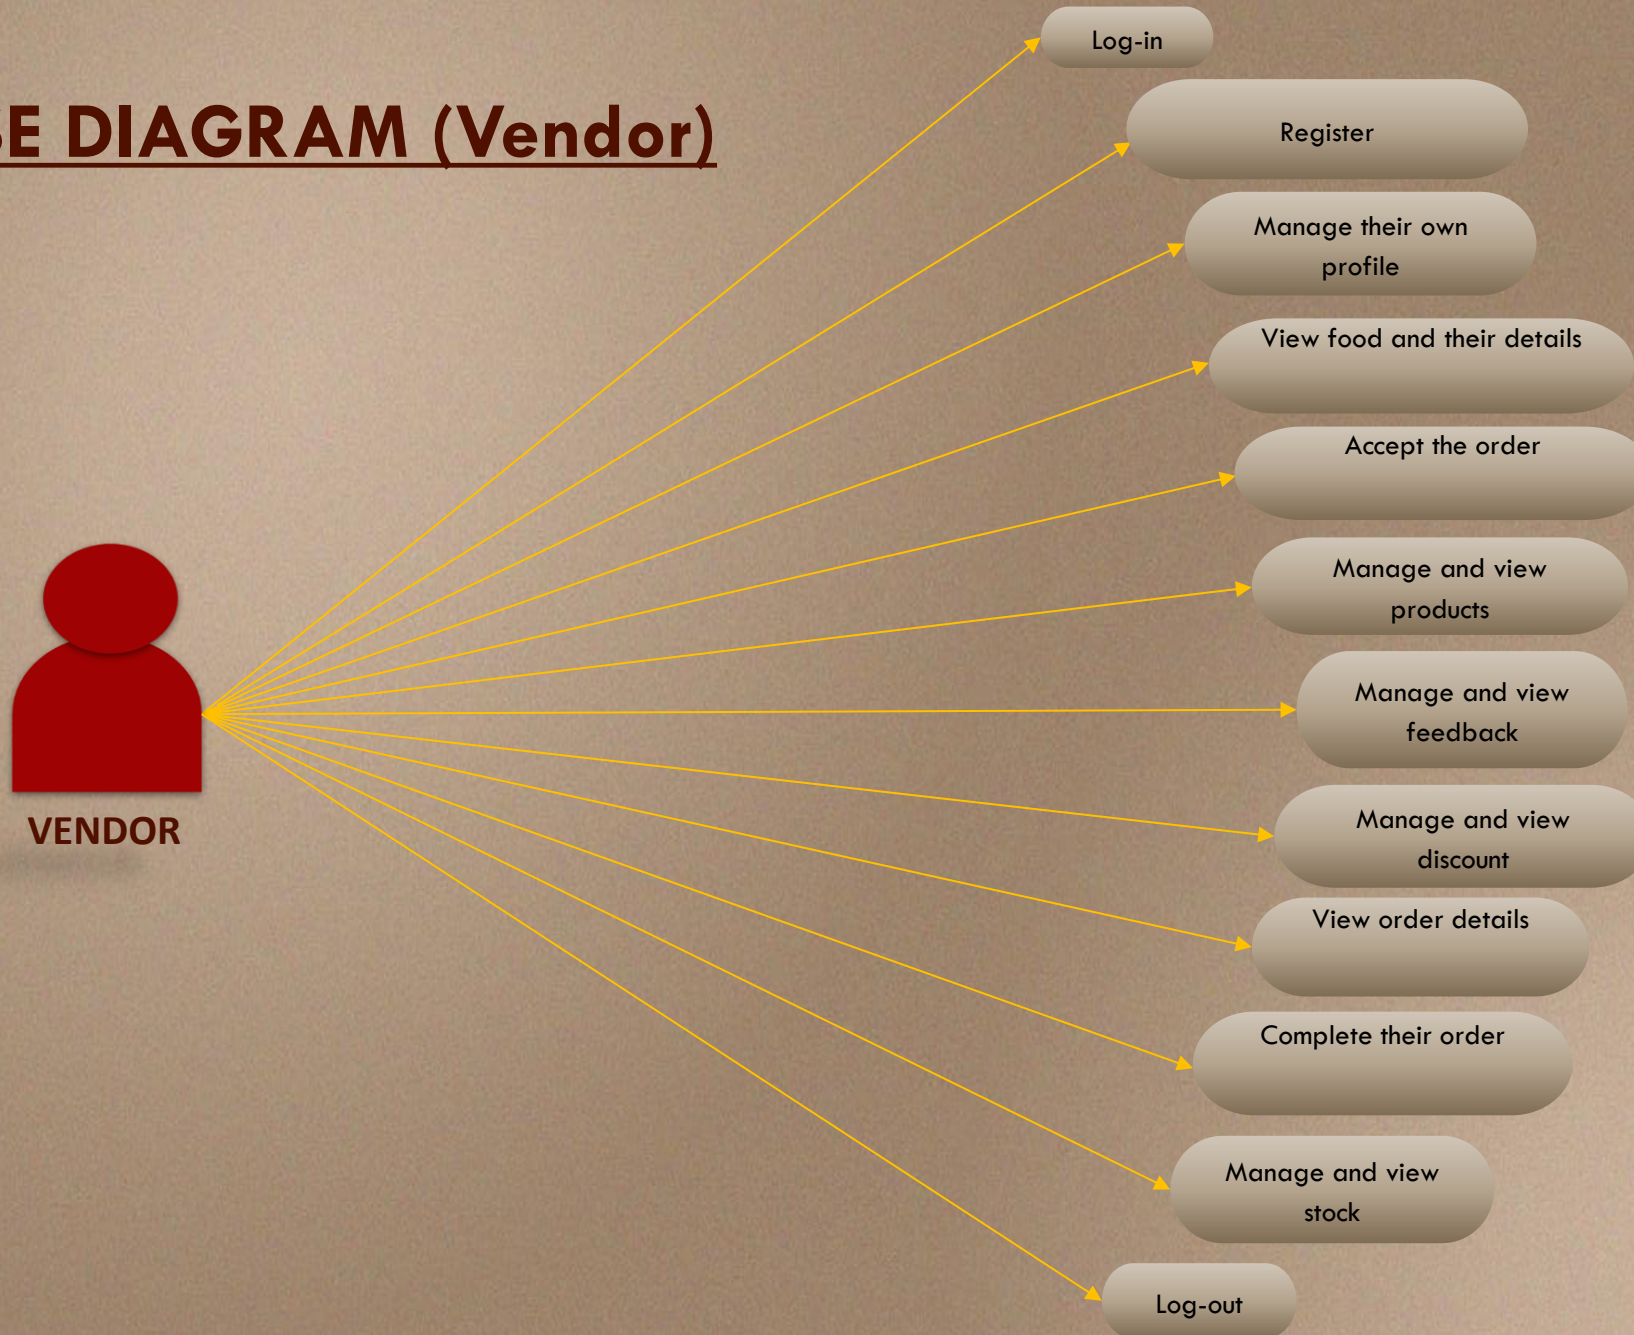

- Secure rider login
- View assigned delivery orders
- Accept or reject orders
- Update delivery status (picked, delivered)
- Track delivery history
- View earnings and payments
- Contact customer if needed
- Efficient route handling
- Manage multiple deliveries

DATABASE STRUCTURE

Table Name: Admin

Description: Use to store information about Admin

Column Name	Data Type	Description
admin_id	int (PK, AI)	Unique admin ID
admin_name	varchar(255)	Name of admin
admin_email	varchar(255)	Admin email (login)
admin_password	varchar(50)	Admin password
admin_contact	varchar(10)	Contact number
reset_token	varchar(255)	Token for password reset
token_expiry	datetime	Expiry time for reset token

Table Name: Vendor

Description: Use to store information about Vendor

Column Name	Data Type	Description
vendor_id	int	Stores vendor ID.
vendor_name	varchar(255)	Store name.
shop_name	varchar(255)	Stores shop name.
City	varchar(255)	Stores city name.
status	enum	Stores vendor status.

Table Name: Rider

Description: Use to store information about Rider

Column Name	Data Type	Description
rider_id	Int	Primary key (Rider ID)
rider_name	varchar(100)	Name of the rider
rider_email	varchar(100)	Email address
rider_password	varchar(100)	Stores Password
rider_contact	varchar(100)	Stores Phone number
rider_status	enum('active','inactive')	Shows Rider availability/status

Table Name: User

Description: Use to store information about User

Column Name	Data Type	Description
user_id	int	Stores user ID
user_name	varchar(255)	Stores user name.
email	varchar(100)	Stores user email.
password	varchar(255)	Stores user password
phone	varchar(20)	Stores user phone number.
address	text	Stores user address.

Table Name: Orders

Description: Use to store information about orders

Column	Data Type	Description
order_id	int	Order ID
order_number	varchar(50)	Order number
customer_name	varchar(100)	Customer
customer_email	varchar(100)	Email
vendor_id	int	Vendor
product_id	int	Product
quantity	int	Qty
order_status	enum	Status
total_amount	decimal(10,2)	Total
payment_method	enum	Payment mode
delivery_address	text	Address
delivery_city	varchar(100)	City
delivery_pincode	varchar(10)	Pincode
payment_status	varchar(50)	Payment status
rider_id	int	Delivery person

Thank you
