Major Project Report On

“Dessert Magic”

As A Partial Requirement for degree

Of

Bachelor of computer application

(B.C.A)

2025-2026

Guided By:-

Mrs. Twinkle Chapatwala

Submitted By:-

Shah Pushti

Ganwani Honey

Panchal Krish

Salunke Krushiv

Acknowledgement

We would like to express our sincere gratitude to our respected project guide **Mrs. Twinkle Chapatwala** for her valuable guidance, continuous encouragement, and support throughout the development of “Dessert Magic” project. Their insightful suggestions and constructive feedback helped us to complete this project successfully.

We are also thankful to our principal **Dr. Sandip Surti** and our vice principal **Mrs. Sumati Shenoy** for providing us with the opportunity to work on this project, which has enhanced our practical knowledge and technical skills. Their support played a vital role in the successful completion of this work.

We would like to extend our appreciation to our friends and classmates for their cooperation and helpful discussions during the project development. Lastly, We are deeply grateful to our family for their constant support, motivation, and encouragement.

This project would not have been possible without the contribution of all these individuals.

Project Profile

Project Title:	Dessert Magic
Duration:	4 Months
Group Members:	4
Frontend tools:	Visual Studio Code
Languages:	PHP, JavaScript, AJAX
Backend:	MySQL, Wamp
Guided By:	Mrs. Twinkle Chapatwala
Submitted By:	Shah Pushti Panchal Krish Ganwani Honey Salunke Krushiv
Operating System:	Operating System

Project Introduction

The “Dessert Magic with Vendor and Rider Management” is a web-based application developed to simplify and digitalize the process of ordering food and managing deliveries. In today’s fast-paced lifestyle, people prefer online services that save time and provide convenience. This system is designed to meet those needs by offering an easy-to-use platform where customers can browse food items, place orders, and receive deliveries at their doorstep.

The application consists of multiple modules includeincluding Admin, Vendor, Customer, and Rider, each having specific roles and responsibilities. Customers can register, log in, view available food items, and place orders. Vendors can manage their products by adding, updating, or deleting food items and handling incoming orders. Riders are responsible for delivering orders to customers and earning delivery charges for each successful delivery.

One of the important features of this system is the vendor approval mechanism. Vendors must register and wait for admin approval before accessing the system. This ensures that only authorized vendors can provide services, maintaining the quality and reliability of the platform. The admin has complete control over the system, including managing vendors, monitoring orders, assigning riders, and generating reports.

The system also includes delivery charge calculation and rider earnings management, making it closer to real-world applications like food delivery platforms. Although advanced features like map-based tracking are not included, the system uses simple and effective logic to handle delivery operations efficiently.

This project is developed using HTML, CSS, and JavaScript for the frontend, PHP for backend processing, and MySQL for database management. The use of these technologies ensures that the system is dynamic, responsive, and capable of handling multiple users.

Overall, the Dessert Magic provides a comprehensive solution for managing food orders, vendor activities, and delivery services in an organized and efficient manner. It helps in reducing manual effort, improving accuracy, and enhancing user experience, making it a practical and valuable application in today's digital environment.

Hardware Requirements

The Dessert Magic is a web-based application and does not require high-end hardware. It is designed to run efficiently on standard computing devices. The following are the hardware requirements for developing and using the system:

1.Processor:

A minimum of Intel Core i3 or equivalent processor is required to run the application smoothly. For better performance and faster processing, an Intel Core i5 or higher processor is recommended.

2. RAM (Random Access Memory):

At least 4 GB of RAM is required for basic operation of the system. However, 8 GB or more is recommended to ensure smooth multitasking, especially during development and when running server environments like XAMPP.

3. Storage (Hard Disk):

A minimum of 500 GB hard disk space is sufficient to store project files, software tools, and database. Using an SSD (Solid State Drive) is recommended for faster data access and improved performance.

4. Input Devices:

Standard input devices such as a keyboard and mouse are required for interacting with the system, entering data, and navigating through the application.

5. Output Devices:

A monitor or display screen is required to view the application interface. A standard resolution display is sufficient for development and usage.

6. Network Requirements:

Although the system can run on a local server (localhost), an internet connection is required for downloading tools, libraries, and for future deployment on a live server.

7. System Type:

The application can run on both 32-bit and 64-bit systems. However, a 64-bit system is recommended for better performance and compatibility with modern software tools.

7.Graphics Requirements:

No dedicated graphics card is required for this project. Integrated graphics available in standard processors are sufficient, as the system does not involve heavy graphical processing.

8. Peripheral Devices:

No special peripheral devices are required. However, optional devices like printers can be used for printing reports or invoices if needed.

9. Power Supply:

A stable power supply is necessary to ensure uninterrupted system operation during development and usage. In case of frequent power cuts, a UPS (Uninterruptible Power Supply) is recommended to prevent data loss.

Overall, the hardware requirements for this system are minimal and easily available, making the project cost-effective and accessible for implementation on standard computing devices.

Software Requirements

The development and execution of the Online Food Ordering System require specific software components to ensure smooth functioning, efficient performance, and proper management of the application. The following are the detailed software requirements:

1. Operating System:

The system requires a compatible operating system such as Windows 10 or higher. It can also run on Linux or macOS environments if supported tools are installed. Windows is commonly used for development due to ease of setup.

2. Frontend Technologies:

HTML (HyperText Markup Language) is used to design the structure of web pages, CSS (Cascading Style Sheets) is used for styling and layout, and JavaScript is used to add interactivity and dynamic behavior to the application.

3. Backend Language:

PHP (Hypertext Preprocessor) is used as the server-side scripting language to handle business logic, form processing, session management, and communication with the database.

4.Database Management System:

MySQL is used as the database to store and manage data such as users, vendors, products, orders, and riders. It ensures data consistency, security, and efficient retrieval of information.

5.Server Environment:

XAMPP (Apache, MySQL, PHP, and Perl) is used as a local server environment. It allows developers to run and test the application on their local machine before deployment.

6.Web Browser:

Modern web browsers such as Google Chrome, Mozilla Firefox, or Microsoft Edge are required to access and test the application. Google Chrome is recommended for its developer tools and compatibility.

7.Code Editor / IDE:

A code editor like Visual Studio Code, Sublime Text, or Notepad++ is required for writing and editing the project code. Visual Studio Code is highly recommended due to its extensions and debugging features.

8.Database Management Tool:

phpMyAdmin is used to manage the MySQL database. It provides an easy graphical interface to create tables, run queries, and manage data without writing complex SQL commands.

9. Version Control (Optional but Recommended):

Git can be used for version control to track changes in the project, manage different versions, and collaborate efficiently. Platforms like GitHub or GitLab can be used to store project repositories.

10.Security and Validation Tools:

Basic validation techniques using JavaScript and PHP are required to ensure proper data input. Password hashing functions (like `password_hash` and `password_verify` in PHP) are used to enhance security and protect user credentials.

Overall, these software components work together to develop, execute, and maintain the Online Food Ordering System efficiently, ensuring a secure and user-friendly application.

Scope

The scope of the “Online Food Ordering System with Vendor and Rider Management” defines the extent, functionalities, and limitations of the system. This system is designed to provide a complete solution for managing online food ordering, vendor operations, and delivery services through a centralized web-based platform. The scope is categorized based on different users and system functionalities.

1.Admin Scope (System Controller):

The admin plays a crucial role in managing and controlling the entire system. The admin has full authority to monitor and regulate all activities within the application. One of the primary responsibilities of the admin is to manage vendor registrations by approving or rejecting vendor requests. Only vendors with approved status are allowed to access the system, ensuring authenticity and quality control.

The admin can view and manage all orders placed by customers, including order details, status, and assigned vendors. The admin is also responsible for assigning riders to specific orders for delivery. Additionally, the admin can manage user accounts, monitor system performance, and generate reports related to orders, vendor activities, and rider earnings. This centralized control ensures efficient management and smooth functioning of the system.

2. Vendor Scope (Product Manager):

Vendors are responsible for managing food items available on the platform. They must first register in the system and wait for admin approval before accessing their dashboard. Once approved, vendors can log in securely and perform various operations.

Vendors can add new food products, including details such as product name, price, category, and description. They can also update existing products or remove items that are no longer available. Vendors have access to customer orders related to their products and can process these orders accordingly. This module allows vendors to efficiently manage their inventory and respond to customer demand.

3. Customer Scope (End User):

Customers are the primary users of the system who interact with the platform to order food. They can register and log in to the system using secure authentication. After logging in, customers can browse a variety of food items provided by different vendors.

Customers can view product details, select items, and place orders easily through the system. The system provides a simple and user-friendly interface for smooth navigation. Customers can also view their order history, track order status, and access

order details. This ensures a convenient and transparent ordering experience.

4.Rider Scope (Delivery Manager):

Riders are responsible for delivering orders to customers. Once an order is assigned by the admin, riders can view the details of the delivery, including customer information and order items. Riders are required to deliver the order within the specified time.

After completing the delivery, riders can update the delivery status in the system. The system calculates delivery charges, which are added to the rider's earnings. Riders can also view their total earnings and delivery history. This module ensures efficient delivery management and proper tracking of rider activities.

5.Order Management Scope:

The system manages the complete lifecycle of an order, starting from order placement by the customer to delivery by the rider. It includes order creation, processing by the vendor, assignment to a rider, and final delivery. The system maintains order records in the database, ensuring data consistency and easy retrieval.

6.Delivery and Earnings Scope:

The system includes a delivery charge mechanism, which can be fixed or based on predefined conditions. This charge is added to the total order amount and is also used to calculate rider earnings. This feature makes the system more realistic and practical.

7.Security and Authentication Scope:

The system implements secure login and authentication mechanisms for all users, including admin, vendors, customers, and riders. Vendor access is restricted until admin approval is granted. Passwords are stored securely using hashing techniques, ensuring data protection.

8.System Integration Scope:

The application integrates multiple modules into a single platform, allowing smooth communication between users. Data is stored in a centralized database, ensuring consistency and reliability. The system reduces manual effort and automates processes such as order handling and delivery assignment.

9. Limitations of the System:

- The system does not include real-time GPS tracking or map integration for delivery.
- Delivery charges are calculated using predefined logic instead of real-time distance.
- Online payment gateway integration is not implemented.
- The system is designed for web use and does not include a mobile application.
-

10. Future Enhancements:

- Integration of GPS and map-based tracking for real-time delivery monitoring
- Implementation of online payment gateways (UPI, cards, wallets)
- Development of mobile applications for Android and iOS
- Advanced analytics and reporting features for admin
- Notification system for order updates.

Overall, the scope of the system covers all essential functionalities required for an efficient online food ordering and delivery platform. It provides a structured and scalable solution that can be further enhanced with advanced features in the future.

Technology Description

=> **PHP:**

PHP is a widely used open-source server-side scripting language designed specifically for web development. It is embedded within HTML and executed on the server, generating dynamic web pages and content before being sent to the client's browser. PHP is known for its simplicity, flexibility, and compatibility with various databases such as MySQL, MariaDB, and SQLite, making it ideal for developing data-driven web applications like the Employee Leave Management System.

Key Features of PHP:

- Open source and free to use
- Platform independent (works on Windows, Linux, macOS)
- Server-side scripting language
- Easy database connectivity (MySQL, etc.)
- Simple and easy to learn syntax
- Fast execution and performance
- Supports multiple protocols (HTTP, FTP, SMTP)

- Large number of built-in functions
- Provides security features (password hashing, sessions)
- Supports session management
- Compatible with Apache, XAMPP, WAMP
- Scalable for small and large applications

=> **MySQL:**

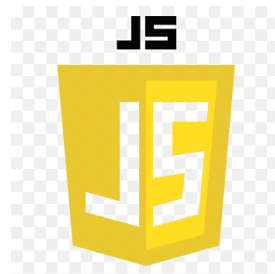

MySQL is an open-source relational database management system (RDBMS) that uses Structured Query Language (SQL) for storing, managing, and retrieving data efficiently. It is one of the most popular databases for web applications due to its reliability, scalability, and ease of integration with programming languages such as PHP.

Key Features of MySQL:

- Open source and free database management system
- Relational Database Management System (RDBMS)
- Uses Structured Query Language (SQL)

- High performance and fast data processing
- Supports multi-user access
- Data security with user authentication and privileges
- Supports large databases

=> JavaScript:

JavaScript is a lightweight, interpreted client-side scripting language used to create interactive and dynamic web pages. It runs directly in the user's web browser and enhances the user experience by enabling real-time actions without reloading the entire page. JavaScript works seamlessly with HTML and CSS to make web applications more responsive and user-friendly. It is widely used for input validation, dynamic content updates, event handling, and interactive UI features.

Key Features of JavaScript:

- Lightweight and fast scripting language

- Runs on client-side (browser-based)
- Adds interactivity to web pages
- Easy to learn and use
- Supports event handling (click, hover, etc.)
- Works with HTML and CSS
- Platform independent
- Supports asynchronous programming (AJAX, Promises)

=> WAMP Server:

WAMP Server (Windows, Apache, MySQL, and PHP) is an open-source web development environment used to create and test dynamic web applications on a Windows operating system. It provides a platform where developers can build, run, and manage PHP-based applications locally before deploying them to a live web server. WAMP Server bundles three main components — Apache (Web Server), MySQL (Database Server), and PHP (Scripting Language) — all configured to work together seamlessly. It also includes phpMyAdmin, a web-

based tool for managing MySQL databases through a graphical interface.

Key Features of WAMP Server:

- Free and open-source web development environment
- Works on Windows operating system
- Includes Apache, MySQL, and PHP
- Easy installation and configuration
- Provides local server (localhost) for testing
- Supports database management via phpMyAdmin
- Allows running dynamic PHP websites
- User-friendly interface (system tray control)

=> **CSS:**

CSS (Cascading Style Sheets) is a stylesheet language used to control the presentation and layout of web pages. It defines how HTML elements are displayed on screen, including their colors, fonts, spacing, alignment, and overall visual design. By separating the content (HTML) from the design (CSS), it

becomes easier to maintain and update web pages. CSS improves the look and feel of a website, making it more attractive, responsive, and user-friendly.

Key Features of CSS:

- Used for styling and designing web pages
- Controls layout, colors, fonts, and spacing
- Separates content (HTML) from design
- Supports responsive design (mobile-friendly)
- Allows reuse of styles across multiple pages
- Improves website appearance and user experience
- Supports animations and transitions
- Provides selectors for targeting elements
- Reduces code repetition
- Faster page loading with external CSS
- Supports multiple layouts (flexbox, grid)
- Compatible with all modern web browsers

=> HTML:

HTML is used to design the basic structure of web pages. It defines the layout of elements such as forms, buttons, tables, and content displayed to users. All user interfaces, including login pages, product pages, and dashboards, are built using HTML.

Key Features of HTML:

- Simple and easy to learn language
- Used to create structure of web pages
- Platform independent
- Supports multimedia (images, audio, video)
- Works with CSS and JavaScript
- Uses tags and elements
- Supports hyperlinks
- Compatible with all browsers
- Enables form creation (input, buttons, etc.)
- Supports semantic elements (header, footer, section)

=> phpMyAdmin:

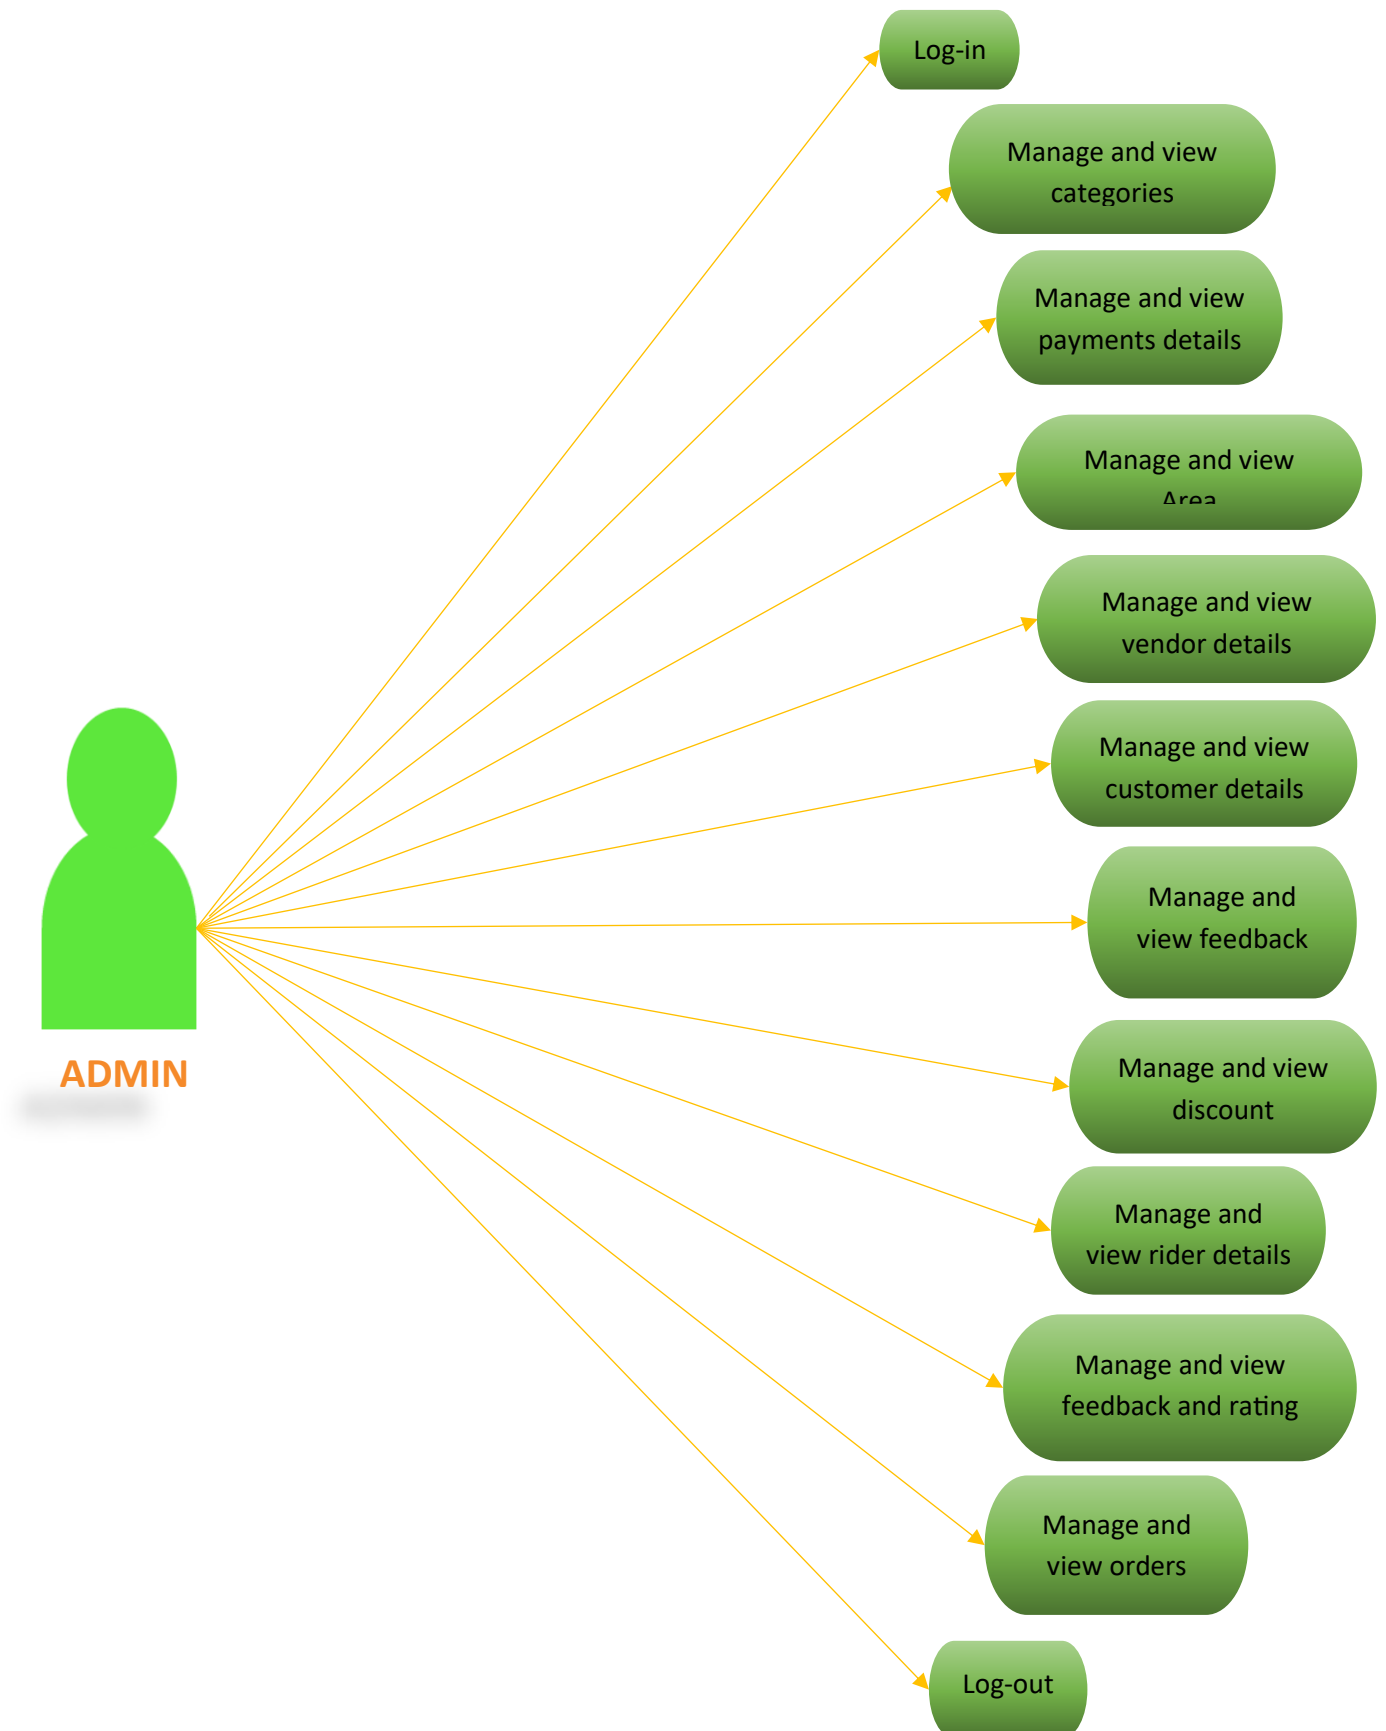

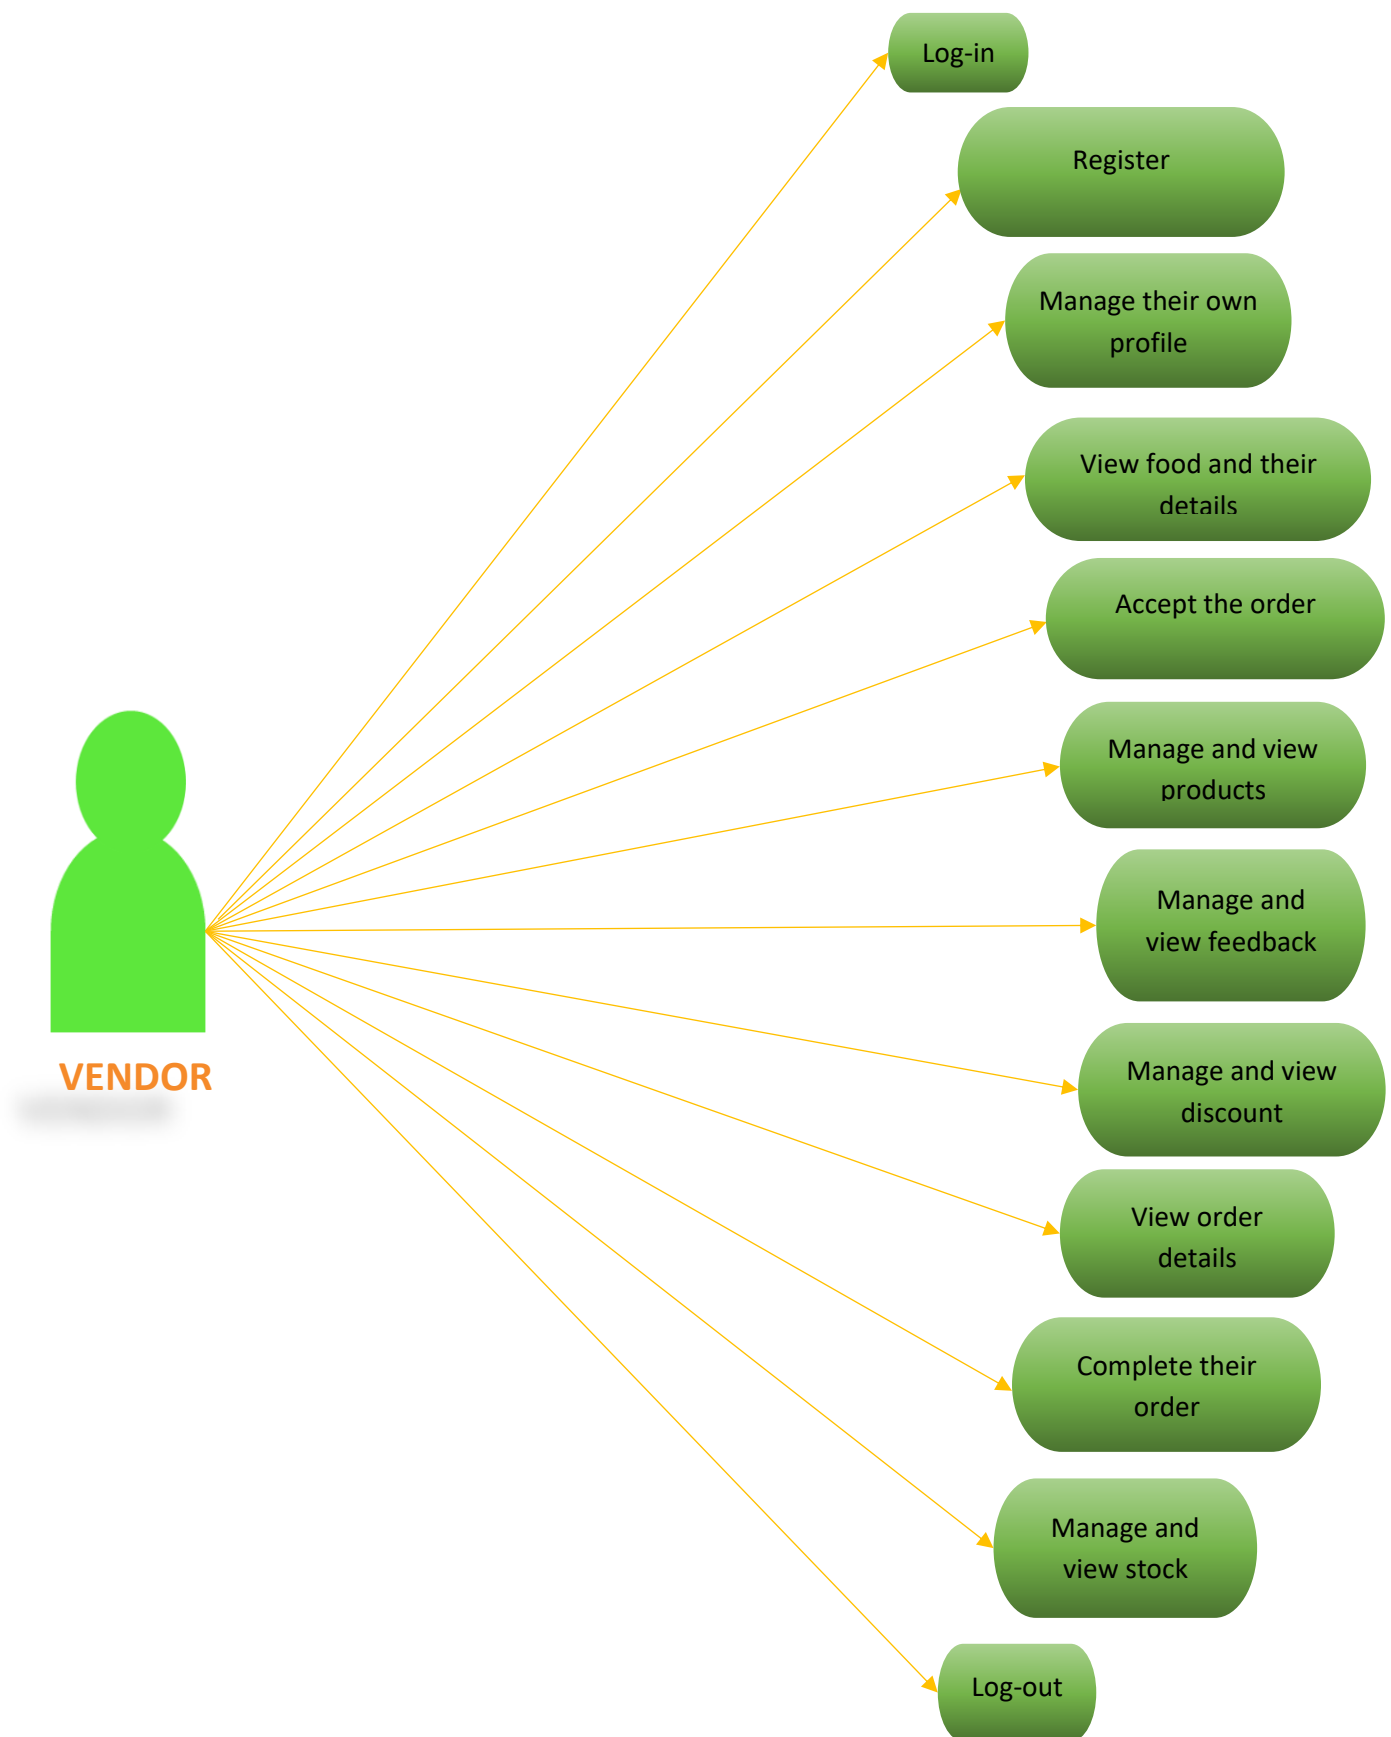

phpMyAdmin is a web-based tool used to manage the MySQL database. It provides an easy interface to create tables, execute queries, insert data, and manage database structures without writing complex SQL commands.

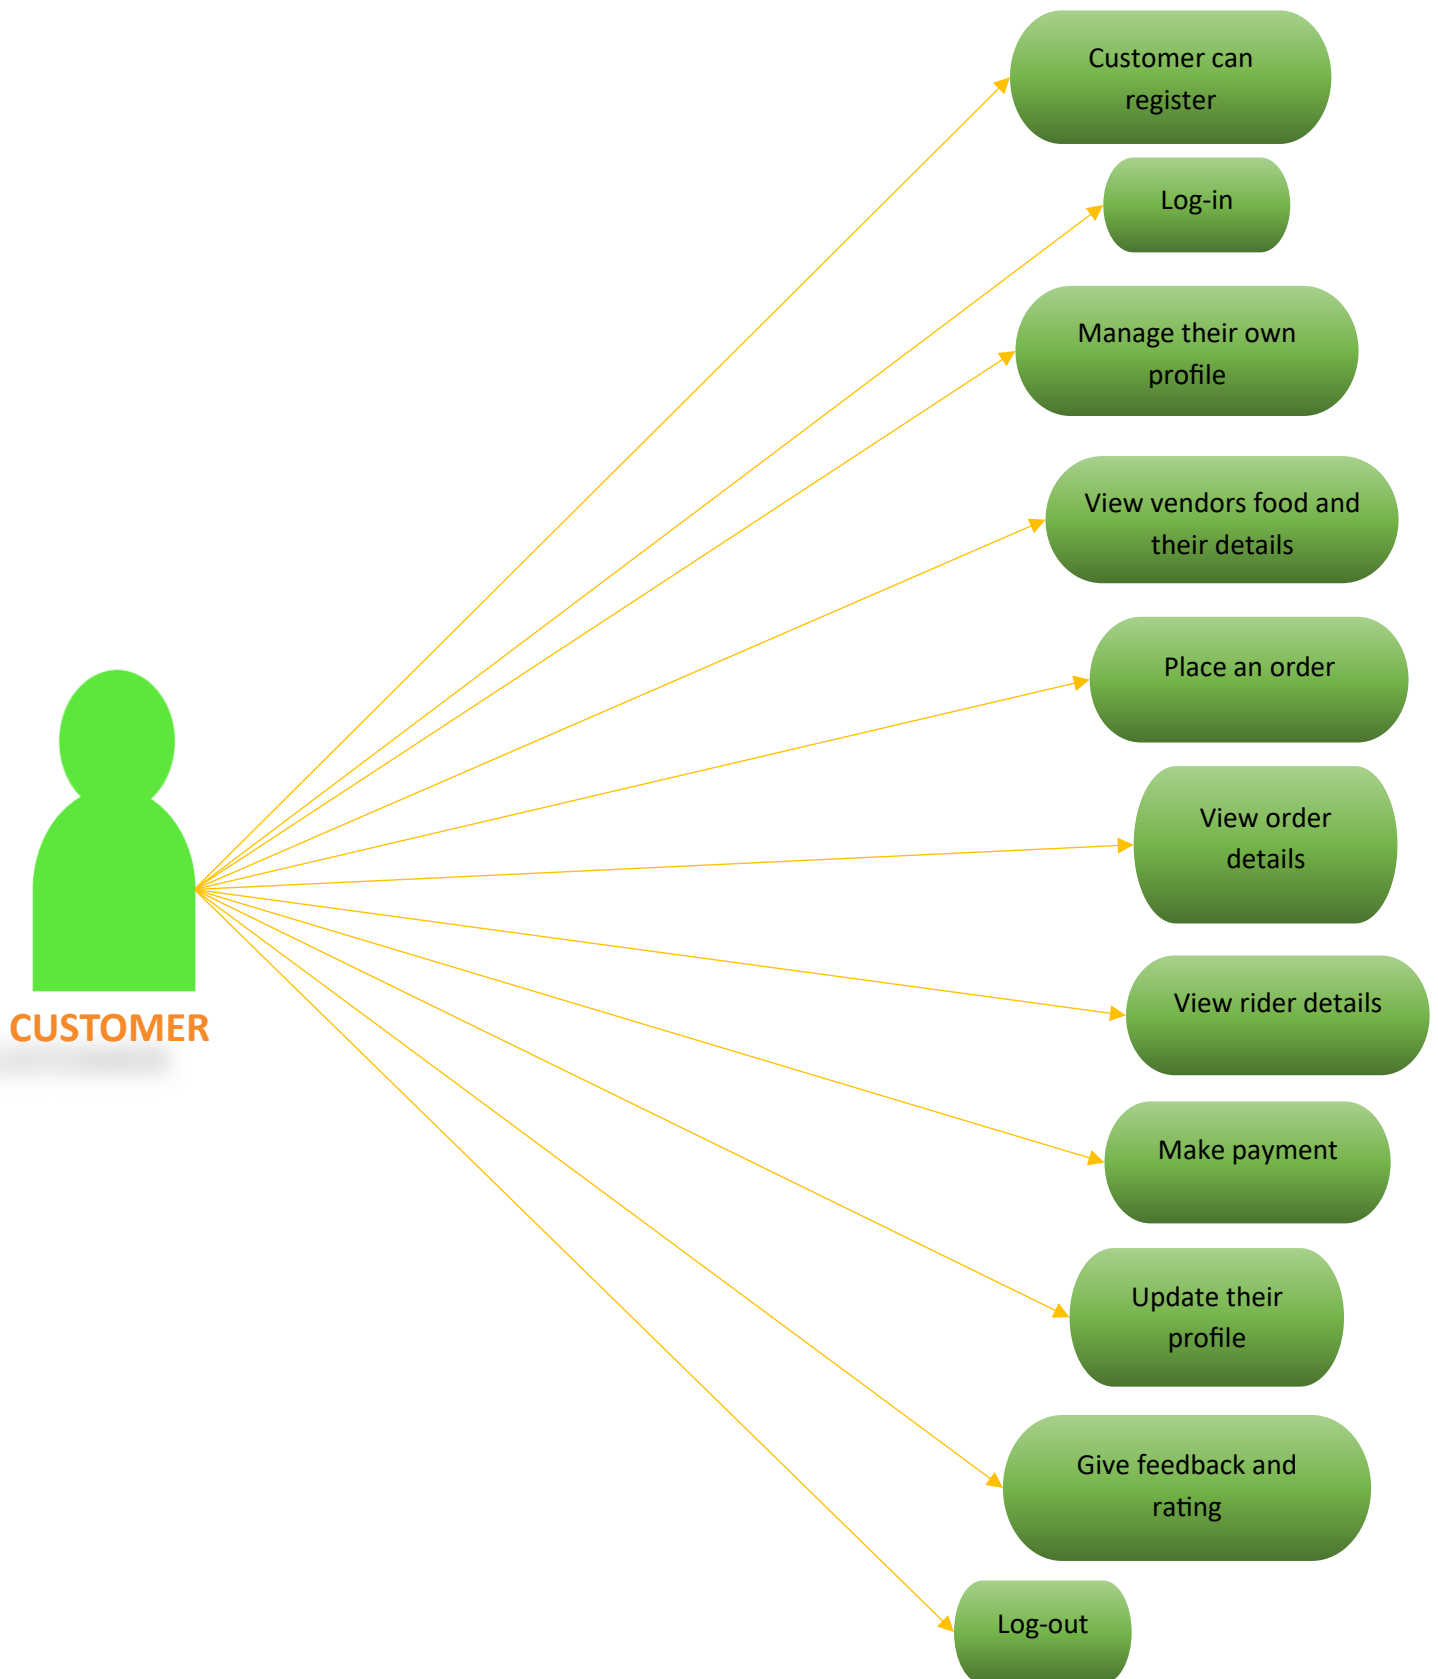

Key Features of phpMyAdmin

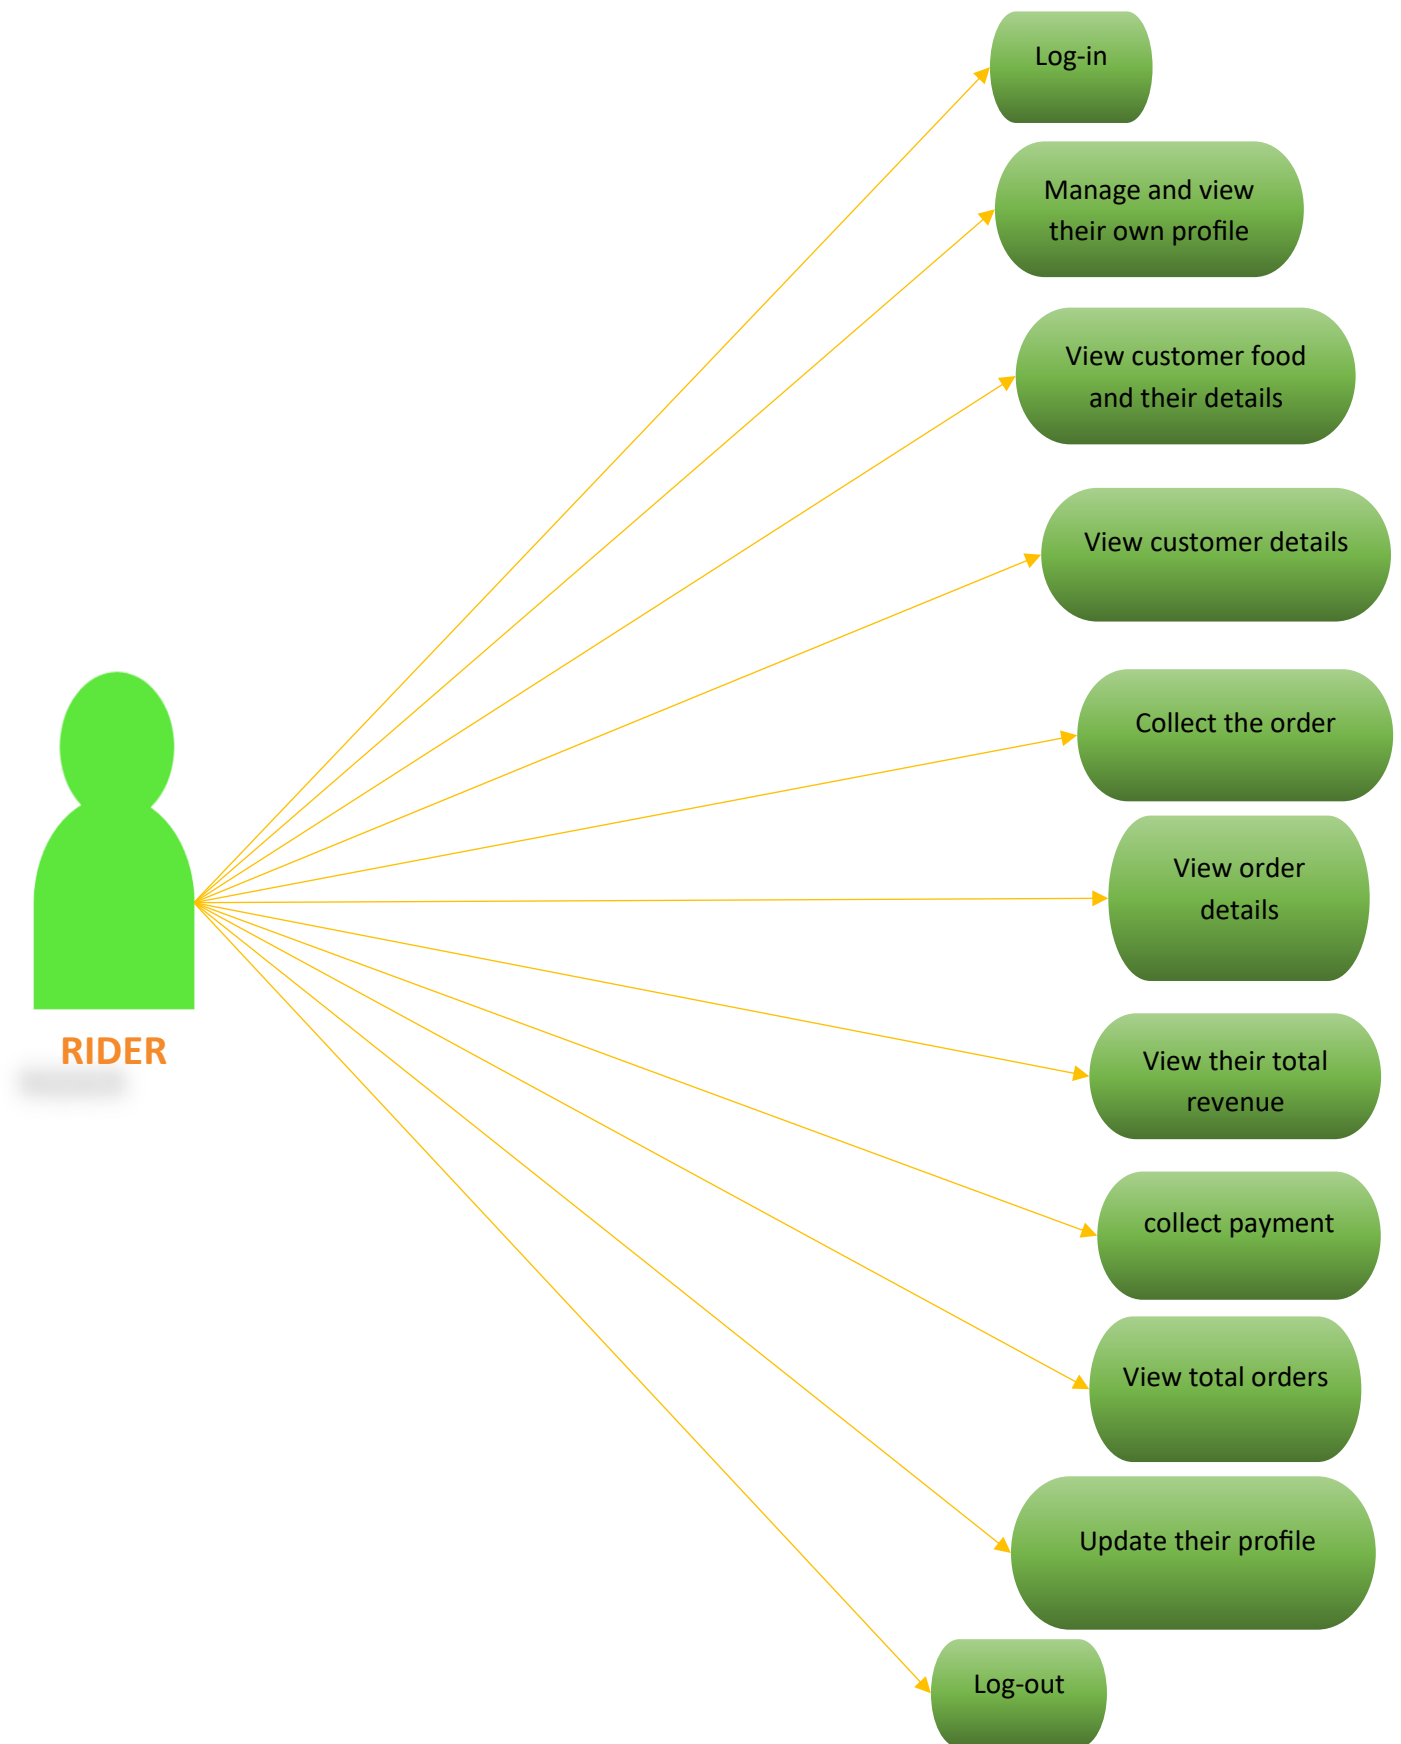

- Open-source and free tool
- Web-based interface for MySQL
- Easy database creation and management
- Allows executing SQL queries
- Import and export databases (SQL, CSV, etc.)
- User-friendly graphical interface
- Supports table creation, editing, and deletion
- Manage users and permissions
- Backup and restore database
- Supports multiple languages

Use-Case Diagram

Database Design

=> Table Name: Admin

Description: Use to store information about Admin

Column Name	Data Type	Description
admin_id	int (PK, AI)	Unique admin ID
admin_name	varchar(255)	Name of admin
admin_email	varchar(255)	Admin email (login)
admin_password	varchar(50)	Admin password
admin_contact	varchar(10)	Contact number
reset_token	varchar(255)	Token for password reset
token_expiry	datetime	Expiry time for reset token

=> Table Name: Vendor

Description: Use to store information about Vendor

Column Name	Data Type	Description
vendor_id	int	Stores vendor ID.
vendor_name	varchar(255)	Store name.
shop_name	varchar(255)	Stores shop name.
City	varchar(255)	Stores city name.
status	enum	Stores vendor status.

=> Table Name: Rider

Description: Use to store information about Rider

Column Name	Data Type	Description
rider_id	Int	Primary key (Rider ID)
rider_name	varchar(100)	Name of the rider
rider_email	varchar(100)	Email address
rider_password	varchar(100)	Stores Password
rider_contact	varchar(100)	Stores Phone number
rider_status	enum('active','inactive')	Shows Rider availability/status

=> Table Name: User

Description: Use to store information about User

Column Name	Data Type	Description
user_id	int	Stores user ID
user_name	varchar(255)	Stores user name.
email	varchar(100)	Stores user email.
password	varchar(255)	Stores user password
phone	varchar(20)	Stores user phone number.
address	text	Stores user address.

=> Table Name: Orders

Description: Use to store information about orders

Column	Data Type	Description
order_id	int	Order ID
order_number	varchar(50)	Order number
customer_name	varchar(100)	Customer
customer_email	varchar(100)	Email
vendor_id	int	Vendor
product_id	int	Product
quantity	int	Qty
order_status	enum	Status
total_amount	decimal(10,2)	Total
payment_method	enum	Payment mode
delivery_address	text	Address
delivery_city	varchar(100)	City
delivery_pincode	varchar(10)	Pincode
payment_status	varchar(50)	Payment status
rider_id	int	Delivery person

=> Table Name: Orders Items

Description: Use to store information about order items

Column	Type	Description
order_item_id	int	Stores item ID
order_id	int	Stores Order
product_id	int	Stores Product
product_name	varchar(255)	Stores Name
quantity	int	Stores Qty
unit_price	decimal(10,2)	Stores Price
subtotal	decimal(10,2)	Stores Total
special_instructions	text	Stores Notes

=> Table Name: Payment

Description: Use to store information about Payment

Column	Type	Description
payment_id	int	Stores payment ID
payment_mode	varchar(25)	Stores mode
payment_type	varchar(25)	Stores type
payment_date_time	datetime	Stores date
transcation_id	text	Stores transaction
payment_status	enum	Shows status

=> Table Name: Voucher Claims

Description: Use to store information about Voucher

Column	Type	Description
claim_id	int	Stores claim ID
user_id	int	Stores user
voucher_code	varchar(100)	Stores code
status	enum	Stores used/active

Description: Use to store information about wishlist

Column	Type	Description
id	int	Stores ID
user_id	int	Stores user
product_id	int	Stores product
created_at	timestamp	Stores time

=> Table Name: Vendor Audit

Description: Use to store information about vendor audit

Column	Type	Description
id	int	Store audit ID
vendor_id	int	Stores vendor
action	varchar(32)	Stores action
ip	varchar(45)	Stores IP address
created_at	datetime	Stores Time

=> Table Name: Stock Management

Description: Use to store information about stock

Column	Type	Description
stock_id	int	Stores Stock ID
product_id	int	Stores product
quantity_added	int	Stores added stock
new_quantity	int	Stores updated stock
stock_date	datetime	Stores date

=> Table Name: Notifications

Description: Use to store information about notifications

Column	Type	Description
user_id	int	Stores user
notification_id	int	Stores notification ID
order_id	int	Stores related order
title	varchar(255)	Stores title
message	text	Stores message
status	enum	Stores read/unread

=> Table Name: User Registration

Description: Use to store information about user register

Column	Type	Description
customer_id	int	Stores customer ID
customer_name	varchar(25)	Stores name
customer_email	varchar(25)	Stores email
customer_password	varchar(25)	Stores password
customer_contact	varchar(15)	Stores phone
register_date	datetime	Stores registration date
customer_status	enum	Stores active/Inactive

=> Table Name: Cart

Description: Use to store information about Cart

Column	Type	Description
cart_id	int	Stores Cart ID
customer_id	int	Stores customer
qty	int	Stores quantity
total	int	Stores Total price
final_price	int	Stores Final price
vendor_id	int	Stores Vendor
cart_category_name	text	Stores Category name
cart_status	tinyint	Stores Active/inactive

=> Table Name: Categories

Description: Use to store information about categories

Column	Type	Description
categories_id	int	Stores Category ID
categories_name	varchar(25)	Stores Category name
categories_status	enum	Stores Active/Inactive
vendor_id	int	Stores Vendor
categories_description	text	Stores Description
categories_image	varchar(255)	Stores Image

=> Table Name: Products

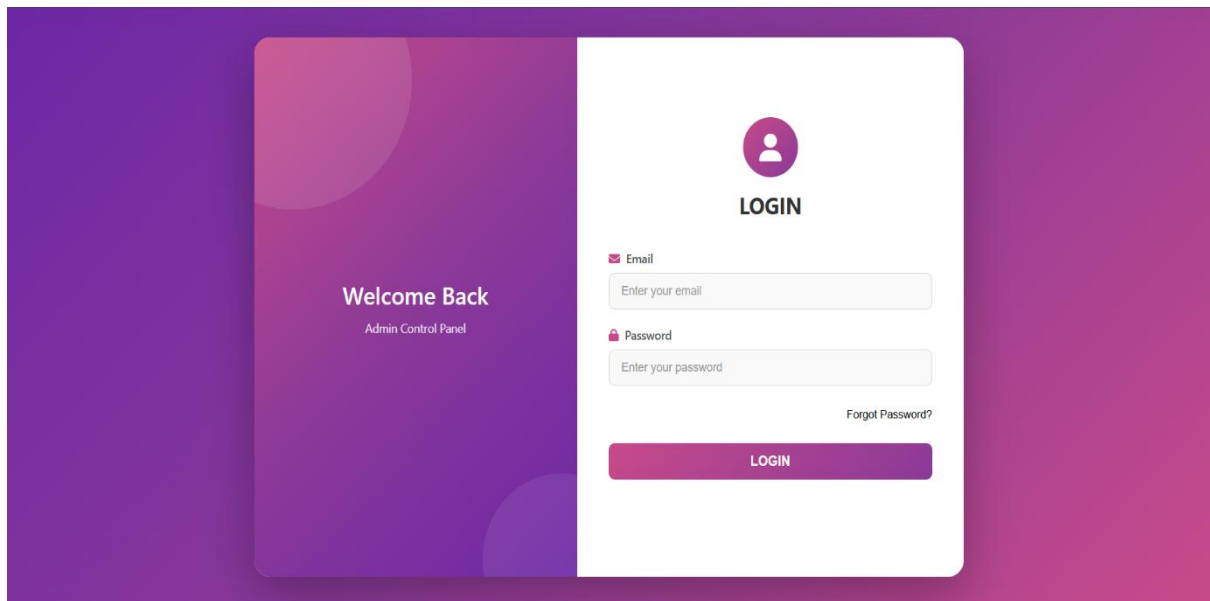

Description: Use to store information about products

Column	Type	Description
product_id	int	Stores Product ID
product_name	varchar(100)	Stores Name
product_description	text	Stores Description
category_id	int	Stores Category
vendor_id	int	Stores Vendor
product_price	decimal(10,2)	Stores Price
product_stock	int	Stores Stock
discount_percent	decimal(5,2)	Stores Discount %
discount_price	decimal(10,2)	Stores Discounted price

➤ User login page

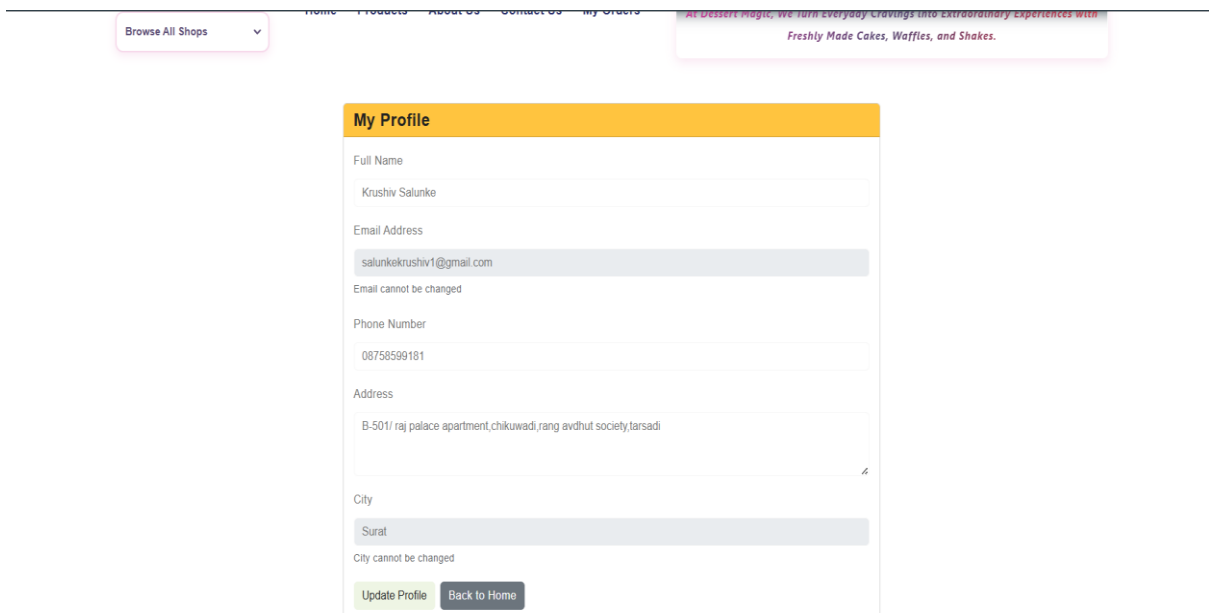

➤ User register page

The registration form is centered on a light pink background decorated with macarons and crumbs. The form itself is a white card with a subtle shadow. It contains the following fields and labels:

- Full Name**: Input field with placeholder text "Enter your full name".
- Email Address**: Input field with placeholder text "Enter your email".
- Phone Number (Optional)**: Input field with placeholder text "Enter your phone number". Below it, a note says "Digits only, no letters or symbols."
- Password**: Input field with placeholder text "Create a password (min 6 characters)". Below it, a note says "Password must be at least 6 characters long".
- Confirm Password**: Input field with placeholder text "Confirm your password".
- Create Account**: A dark purple button at the bottom of the form.

➤ User profile page

The user profile page features a navigation bar at the top with links: Home, Products, About Us, Contact Us, and My Orders. Below the navigation bar, there are two promotional banners. The first banner on the left says "Browse All Shops" with a dropdown arrow. The second banner on the right says "At Dessert Magic, we turn everyday cravings into extraordinary experiences with Freshly Made Cakes, Waffles, and Shakes." Below the banners is the "My Profile" section, which is a white card with an orange header. The profile form contains the following fields and labels:

- My Profile**: Orange header for the profile section.
- Full Name**: Input field with the value "Krushiv Salunke".
- Email Address**: Input field with the value "salunkekrushiv1@gmail.com". Below it, a note says "Email cannot be changed".
- Phone Number**: Input field with the value "08758599181".
- Address**: Input field with the value "B-501/ raj palace apartment, chikuwadi, rang avdhut society, tarsadi".
- City**: Input field with the value "Surat". Below it, a note says "City cannot be changed".
- Update Profile**: A green button.
- Back to Home**: A dark grey button.

At Dessert Magic, We Turn Everyday Cravings into Extraordinary Experiences with Freshly Made Cakes, Waffles, and Shakes.

About Us

Learn more about Dessert Magic and our story

Home Sweet Bakery

At Dessert Magic, every treat is crafted with passion. Our journey began with a few dedicated bakers in a small kitchen, and today we're proud to partner with dozens of local vendors across the region.

From classic pastries to modern confections, we make sure each product is prepared using the finest ingredients and traditional techniques. At Dessert Magic, we believe desserts are more than just food—they are experiences filled with joy, celebration, and comfort. From fluffy pancakes to rich chocolate cakes and refreshing thickshakes, every item is crafted to bring happiness in every bite.

📌 Our Mission :

Our mission is to Deliver fresh, high-quality desserts Create memorable sweet experiences Provide fast and reliable service Make every celebration extra special.

🌟 Our Vision :

We aim to become a trusted and loved dessert destination, known for Unique and creative dessert combinations Premium taste at affordable prices A delightful experience for every customer.

🍰 Our Specialties :

Dessert Magic

creative dessert combinations Premium taste at affordable prices A delightful experience for every customer.

Test Cases

=> Authentication Module:

Test ID	Description	Steps	Expected Result
TC_AUTH_01	Valid Login	Enter valid email & password → Click login	User redirected to dashboard
TC_AUTH_02	Invalid Login	Enter wrong credentials	Error message displayed
TC_AUTH_03	Empty Fields	Leave fields blank and submit	Validation message shown
TC_AUTH_04	Registration	Fill form and submit	Account created successfully

=> Rider Module

Test ID	Description	Steps	Expected Result
TC_RIDER_01	Rider Login	Enter rider credentials	Rider dashboard opens
TC_RIDER_02	View Orders	Login → Open assigned orders	Orders list displayed
TC_RIDER_03	Accept/Reject Order	Select order → Accept/Reject	Order status updated
TC_RIDER_04	Update Delivery	Mark order as delivered	Status updated to delivered
TC_RIDER_05	Update Location	Send location update	Location saved successfully
TC_RIDER_06	View Earnings	Open earnings page	Earnings displayed correctly

=> Admin Module:

Test ID	Description	Steps	Expected Result
TC_ADMIN_01	Admin Login	Enter admin credentials	Dashboard loads
TC_ADMIN_02	Manage Users	Add/Edit/Delete users	Changes saved successfully
TC_ADMIN_03	Manage Orders	View/manage orders	Orders updated correctly
TC_ADMIN_04	Assign Rider	Assign rider to order	Rider assigned successfully
TC_ADMIN_05	Upload Image	Upload file	Image uploaded successfully

=> Order Module:

Test ID	Description	Steps	Expected Result
TC_ORDER_01	Place Order	Select items → Place order	Order created successfully
TC_ORDER_02	Order History	Open history page	Past orders displayed
TC_ORDER_03	Cancel Order	Cancel an order	Order cancelled successfully

=> Security Module:

Test ID	Description	Steps	Expected Result
TC_SEC_01	Session Timeout	Stay idle for long time	Auto logout
TC_SEC_02	Unauthorized Access	Access without login	Redirect to login page

=> UI/UX Testing:

Test ID	Description	Steps	Expected Result
TC_UI_01	Responsive Design	Open in mobile/desktop	UI adjusts properly
TC_UI_02	Navigation	Click all links	All pages open correctly

=> Performance Testing:

Test ID	Description	Steps	Expected Result
TC_PERF_01	Load Testing	Simulate multiple users	System performs well

Conclusion

The testing of the Food Delivery System has been carried out systematically to ensure that all major modules—Authentication, Admin, Rider, Order Management, Security, File Handling, UI/UX, and Performance—function correctly and meet the expected requirements.

During the testing process, a comprehensive set of test cases was designed and executed to validate both functional and non-functional aspects of the system. The results confirm that the application is capable of handling core operations such as user login and registration, order placement, rider assignment, delivery tracking, and administrative control efficiently and accurately.

The **Authentication module** ensures secure access with proper validation and error handling. The **Admin module** successfully manages users, orders, and system data, providing full control over operations. The **Rider module** performs reliably in handling order assignments, updating delivery status, and tracking location, which is critical for real-time delivery services. The **Order module** demonstrates accurate processing of user requests, including order placement, history tracking, and cancellation.

In addition, **security testing** confirmed that unauthorized access is restricted and session management is properly handled. The **file upload functionality** works as expected with

appropriate validation for file types. The **UI/UX testing** ensures that the system is user-friendly, responsive, and easy to navigate across different devices. Furthermore, **performance testing** indicates that the system can handle multiple users and maintain stability under load conditions.

Overall, the system meets the specified requirements and performs reliably under various scenarios. Any minor issues identified during testing can be addressed with further optimization and improvements. The application is therefore considered stable, efficient, and ready for deployment in a real-world environment.

Furthermore, the testing process highlighted the importance of maintaining data integrity and consistency across all modules. Proper validation checks and error-handling mechanisms ensure that incorrect or incomplete data does not affect system performance. The integration between different components, such as admin controls, rider operations, and user activities, was verified to work seamlessly, demonstrating that the system architecture is well-coordinated and reliable. This level of integration is essential for delivering a smooth and uninterrupted user experience in real-time applications.

In future enhancements, the system can be improved by incorporating advanced features such as real-time notifications, GPS-based live tracking, secure online payment integration, and analytics dashboards for better decision-making.
